

# PARTRIDGE OF REDDITCH

*designed and manufactured  
in the UK for anglers  
who want the very best  
performance characteristics*

## F L Y L I N E

The new **Partridge 'S' Series** is a very special range of fly lines that have been designed and manufactured in the UK for anglers who want the very best performance characteristics.

Utilizing state of the art production facilities, the **Partridge 'S' Series** features radical new designs that are totally memory free, super slick, durable and provide wonderful presentation.

All **Partridge 'S' Series** lines are hand checked for quality and packed in tins to ensure they reach the customer in perfect condition.

### Partridge 'S' Series Continuous Leader & Backing Profile

Shooting Distance · Reservoir · Payload · Dry and Delicate

*Spey lines do not have continuous backing*

#### Seamless Continuous Front Leader

The 3' continuous front leader greatly improves turnover and presentation. Monofilament leaders can be tied directly to this thin section of fly line with the smallest of knots. Alternatively it can be trimmed back for the attachment of a conventional braided loop.

#### Seamless Continuous Backing

The continuous attached backing provides a seamless join between the main line and the running backing line. When applied to the Shooting Distance it produces a line that's guaranteed to cast further. The typical increase in distance is between 5 and 10 yards!

### 'S' SERIES FEATURES

- Complex and compound tapers to suit the lines application
  - Correct line AFTMA ratings
- Continuous attached backing with no connections or knots on Shooting Distance, Reservoir, Payload, and Dry and Delicate
- Continuous 3' front end leader with super smooth transition
  - Choice of leader attachment options
- Free line loader to eliminate twists and ensure correct loading

### FLY LINE LOADER

All Partridge S Fly lines come with a free Line Loader located inside the perspex line spool. This ingenious device makes the problem of loading fly lines without twist and tangling a thing of the past. The 3 part moulding sits neatly inside the spool and can also be used to wind lines back onto the spool for storage.
